Topic Theme and Golden Thread
Why do animals need to evolve?

This theme explores the fascinating question of why animals need to evolve, highlighting the connections between life, change, and survival. In science, we will investigate how evolution helps species adapt to their environment, ensuring their survival in a changing world. In geography, we will explore the islands of the world, discovering how unique environments have influenced the evolution of animals.

Advocacy – Something more*

	<i>Communicators</i>	<i>Explorers</i>	<i>Readers</i>	<i>Believers</i>
<i>All things are possible if you believe</i>	Children will communicate the theme through presentations, collaborative projects, and storytelling, using art, writing, and discussions to express their understanding of evolution and geography.	Children will explore this through hands-on investigations, interactive activities, and research, using maps, experiments, and observations to deepen their understanding of evolution and island geography.	Children will explore this through engaging texts, stories, and case studies, discovering how evolution and island geography shape the natural world and its remarkable diversity.	Children will explore this by reflecting on the wonder of nature, considering how evolution and the uniqueness of islands reveal the interconnectedness of all life.
